Global Health Conference

Berlin, March 24th, 2017

9:00 - 16:00h

ROBERT KOCH INSTITUT

Putting Outbreaks into perspective

Public Health impact of outbreaks of communicable
diseases for France and Germany

In partnership with the scientific service
of the Embassy of France in Berlin

AMBASSADE DE FRANCE
EN ALLEMAGNE

As transborder mobility of humans, animals, food, and feed products increases, the threat of spreading dangerous pathogens and infectious diseases increases as well. Today, whether carried by an unaware traveler or an opportunistic vector, human pathogens can rapidly arrive anywhere in the world. However, these outbreaks and their consequences for countries such as Germany and France should be put into perspective: Although outbreaks of infectious diseases are very often associated with ebola or zika, viruses causing measles, influenza, acute gastroenteritis or tick borne encephalitis may have much greater Public Health impact for our living environment in France and Germany.

This conference, co-organized by the Robert Koch Institute, unites experts, political decision makers, journalists, students and interested public to better understand the consequences of globalization on Public Health through a transdisciplinary Franco-German approach. It is the sixth conference in a series of workshops and conferences on Global Health issues organized by the Centre Virchow-Villermé for Public Health Paris-Berlin since 2014.

The conference is moderated by Derrick Williams, Deutsche Welle Science & Healthcare Correspondent.

The conference language is English.

15:50 – 16:00	Conclusion	Prof. Dr. Dr. Tobias Kurth, Centre Virchow-Villermé

The Centre Virchow-Villermé for Public Health Paris-Berlin was initiated by the Franco-German Council of Ministers and co-established on 15 April 2013 by the University of Sorbonne Paris Cité and the Charité - Universitätsmedizin Berlin on the occasion of the 50th anniversary of the Elysée Treaty.

The mission of the French-German initiative is to jointly develop and promote innovative education and to offer a bi-national platform for linking research with policy in Global Public Health.

The objectives of the Centre are to foster faculty and students' mobility between France and Germany, to organize French-German dialogue in Global Public Health, to contribute to research activities in different areas of Global Public Health, to play a leading role in innovative education in Global Public Health and to promote open access to education and research.
